Go to file>export>manual server setup

Save all files in your rot directory...in your case /public_HTML/newpathwaysconsultants After saving u will c the below box

Click Open in explorer buttonsave all files in root directory..... in your case

/public_HTML/newpathwaysconsultants

Click copy to clipboard

Export successful! You're almost ready to process form results on your own server. Just complete the	se two steps:
Stan 1. Baste this code where you want the form to appear on your page.	
Consistence of the second sec second second sec	
(Schip type=text/passing): 2000/ment/window/location.sea/ch.et/". Window/location.sea/ch.et/".Window/Window/location.sea/ch.et/".Window/Window/location.sea/ch.et/".Window/Window/Window/location.sea/ch.et/".Window/Windo Kimimawi/Window/Wi	eCup
<pre></pre> (froscript) (iframe height="685" style="border:none; background:transparent; overflow:hidden; width:100%;"	~
Copy to Clip	board
Step 2: Click the "Open in Explorer" button below. This folder contains all of the files/folders you nee form to function. Simply upload the contents of this folder to your server, placing them in the same fol webpage the form will appear on. For more detailed instructions, click <u>here.</u>	d for your der as the
W:\www\clbis2webdesign\clbis2webdesgincontactform_exported	plorer
	Done

Open your web site in xarawebdesigner Create a place holder Right click black place holder Go to web properties

Click the placeholder tab

Click the HTML code body Paste code from clip board Tick re-generate placeholder image..... Apply then save

U should see something like below in your place holder

Publish or ftp your web site to your root in your case /public_HTML/newpathwaysconsultants

That's it should all work
