

I am having a problem similar to that described here. The solutions discussed here don't seem to work for me.

On a page that is A0, I create a rectangle with 24 pt line and a clear center. I then apply the feather tool (to 0.2 in). When I then export the page to PDF (300 dpi), the feather is gone in the PDF. I just get the solid rectangle in the PDF.

Is there an easy solution that I'm missing?
